EDUCATION

Tennessee Technological University

Bachelor of Science in Computer Science

Cookeville, TN

Aug. 2019 – May 2024

EXPERIENCE

Programmer Analyst I

Sep. 2024 – March 2026

Wearwell

Smyrna, TN

- Designed, developed, and maintained data visualization and reporting solutions to support operational, production, and performance analysis across 5+ departments
- Engineered and enhanced Tableau dashboards for real-time and historical data reporting, improving access to key business and production metrics
- Wrote SQL queries and performed data extraction, transformation, and validation from relational databases and Epicor ERP systems reducing reporting errors by 30%

Software Engineer Intern

Oct. 2023 – May 2024

CodeTank Labs

Knoxville, TN

- Contributed to the design and development of production-level software features in a client-facing SaaS environment
- Developed and enhanced a payment processing system by implementing additional payment methods, invoice management functionality, and performance improvements
- Integrated Stripe APIs to support secure payment handling and transaction processing
- Designed and implemented a sales representative interface using Ruby on Rails, SQL, and Angular to improve usability and workflow efficiency

PROJECTS

PLCBridge | CODESYS, Python, Modbus TCP, AWS CDK, Lambda, DynamoDB, SNS

March 2026 – Present

- Building a simulated industrial conveyor system using CODESYS with ladder logic to model real-world PLC-controlled material handling workflows
- Implementing Modbus TCP communication protocol to poll simulated PLC tags and bridge control system data to a cloud-based monitoring layer
- Designing a serverless AWS architecture using Lambda and EventBridge to ingest tag data, trigger alerts via SNS, and store incident logs in DynamoDB
- Provisioning all infrastructure as code using AWS CDK with IAM least-privilege policies across cloud and control system boundaries

NetPulse | AWS CDK, Python, Lambda, Step Functions, DynamoDB, EventBridge, SNS

Jan 2026 – March 2026

- Built an automated network health monitoring system on AWS that detects degraded endpoints and self-remediates without human intervention
- Designed and deployed a Step Functions state machine orchestrating a multi-step remediation workflow — retry, reroute, alert, and resolve — triggered by Lambda-based endpoint probes
- Provisioned all infrastructure as code using AWS CDK, including DynamoDB incident tracking with GSI, EventBridge scheduling, and SNS alerting
- Wrote unit tests using pytest and moto to mock AWS services, achieving full test coverage without requiring live cloud resources

Portfolio Website | HTML, CSS, JavaScript, Git, GitHub Pages | memillyow.github.io

April 2025 – Present

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL (Postgres), JavaScript, HTML/CSS, R

Operating System: Windows, Linux, MacOS

Developer Tools: Git, Docker, AWS (Lambda, CDK, DynamoDB, Step Functions, API Gateway, Bedrock, EventBridge, SNS), VS Code, IntelliJ, Ignition (Inductive Automation)

Software Engineering: Object Oriented Programming (OOP), Data Structures & Algorithms, SDLC, Backend Development, API Integration, Serverless Architecture, Infrastructure as Code (IaC), Version Control (Git & GitHub)

AI/ML: LLM Integration, Prompt Engineering, Amazon Bedrock, Claude (Anthropic)
